Description

The CBMG719 is a monolithic CMOS SPDT switch. This switch provides low power dissipation yet gives high switching speed, low on resistance, and low leakage currents. The CBMG719 can operate from a single-supply range of 1.8 V to 5.5 V.

Each switch of the CBMG719 conducts equally well in both directions when on. The CBMG719 exhibits break-before-make switching action. Because of the advanced submicron process, -3 dB bandwidths of greater than 200 MHz can be achieved.

The CBMG719 is available in an 8-lead MSOP package and SOT23-6 package.
