

Features

- Dropout Voltage: 1.39V(Typ)
- Reference/Output Voltage Trimmed to $\pm 2\%$
- Maximum Input Voltage: 15V
- Adjustable Output Voltage or Fixed: ADJ, 1.5V, 1.8V, 2.5V, 3.3V, 5V
- Load Regulation typically at 0.4%(Max)
- Current Limiting and Thermal Protection
- Standard 3-Pin Power Packages
- Operating Temperature Range: -40 to +125°C

Applications

- Post Regulator for switching DC/DC Converter
- High Efficiency Linear Regulator
- Battery Chargers
- PC Add on Card
- Motherboard clock supplies
- LCD Monitor
- Set-top Box

General Description

The CBM1117 is a series of low dropout voltage regulators which can provide up to 0.8A of output current. The CBM1117 is available in fixed voltage, 1.5, 1.8, 2.5, 3.3 and 5.0V. Additionally it is also available in adjustable version. On chip precision trimming adjusts the reference/ output voltage to within $\pm 2\%$. Current limit is also trimmed to ensure specified output current and controlled short-circuit current.

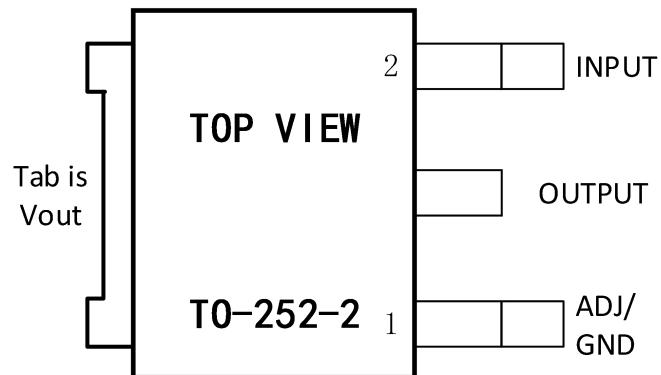

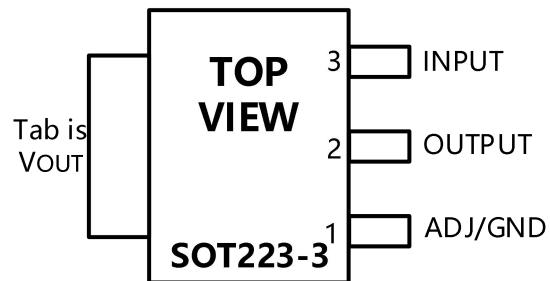

The CBM1117 series is available in SOT-223, TO-252 packages.

A minimum of 10uF tantalum capacitor is required at the output to improve the transient response and Stability.

Pin Configuration

Pin Description

Num	Symbol	I/O	Description
1	ADJ/GND	--	Adjust pin for adjustable output option. Ground pin for fixed output option
2	OUTPUT	O	Output voltage pin for the regulator
3	INPUT	I	Input voltage pin for the regulator

Typical Application

$$V_{OUT} = 1.25 \left(1 + \frac{R_2}{R_1} \right)$$

* C_{ADJ} is optional, however it will improve ripple rejection.

Maximum Ratings

SYMBOL	DESCRIPTION	MAX	UNITS
V_{IN}	Input Voltage	15	V
I_{OUT}	DC Output Current	$PD/(V_{IN}-V_O)$	mA
T_J	Operating Junction Temperature Range (* in case of CBM1117X-(1.2))	-40 to 125 (* 0 to 150)	°C
θ_{JA}	Thermal Resistance Junction-to-Ambient (SOT-223)	150	°C/W
θ_{JA}	Thermal Resistance Junction-to-Ambient (TO-252)	80	°C/W
θ_{JA}	Thermal Resistance Junction-to-Ambient (TO-220)	60	°C/W
θ_{JC}	Thermal Resistance Junction-to-Case (SOT-223)	35	°C/W
θ_{JC}	Thermal Resistance Junction-to-Case (TO-252)	22	°C/W
θ_{JC}	Thermal Resistance Junction-to-Case (TO-220)	15	°C/W

* Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied.

Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

*X=DT or C, used to distinguish product packaging.

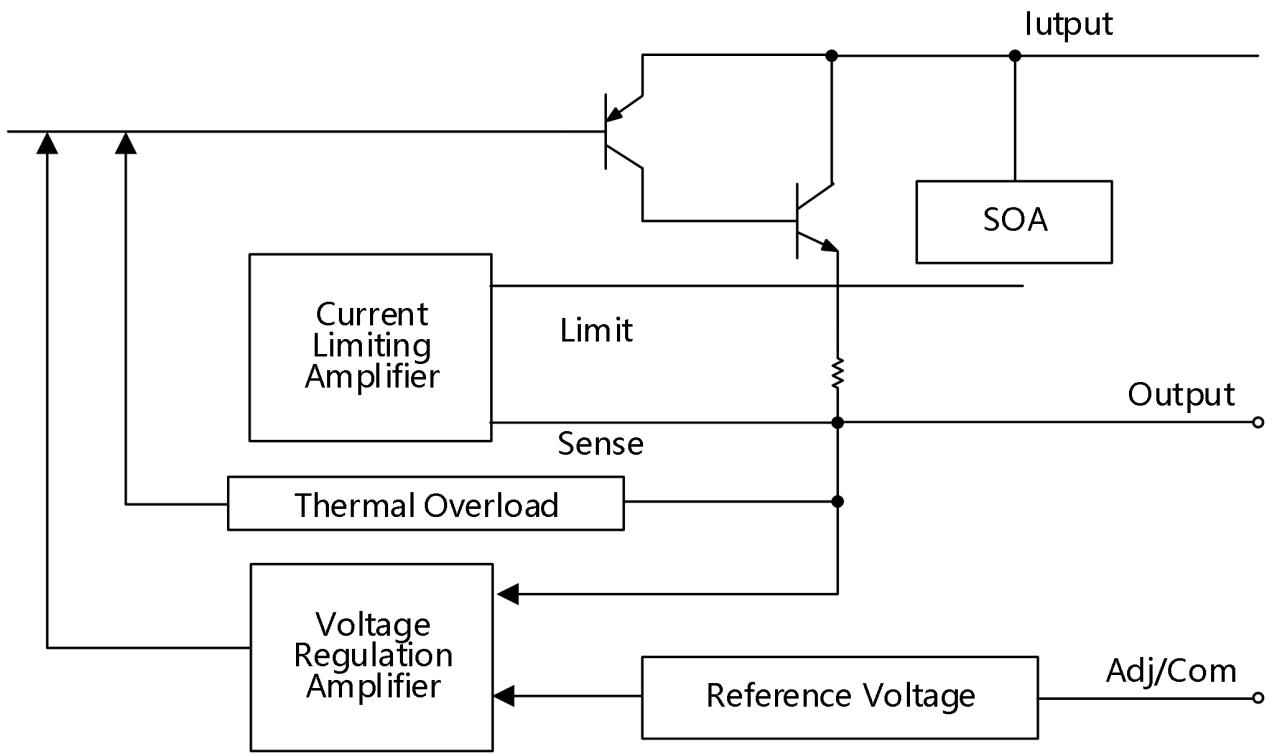

Electrical characteristics

$T_J = 25^\circ\text{C}$, unless otherwise specified

Application Information

Output voltage adjustment

Like most regulators, the CBM1117 regulates the output by comparing the output voltage to an internally generated reference voltage. On the adjustable version as shown in Fig.4, the V_{REF} is available externally as 1.25V between V_{OUT} and ADJ. The voltage ratio formed by R1 and R2 should be set to conduct 10mA (minu-mum output load).

The output voltage is given by the following equation: $V_O = V_{REF}(1 + R2/R1) + I_{ADJ} \cdot R2$

On fixed versions of CBM1117, the voltage divider is provided internally

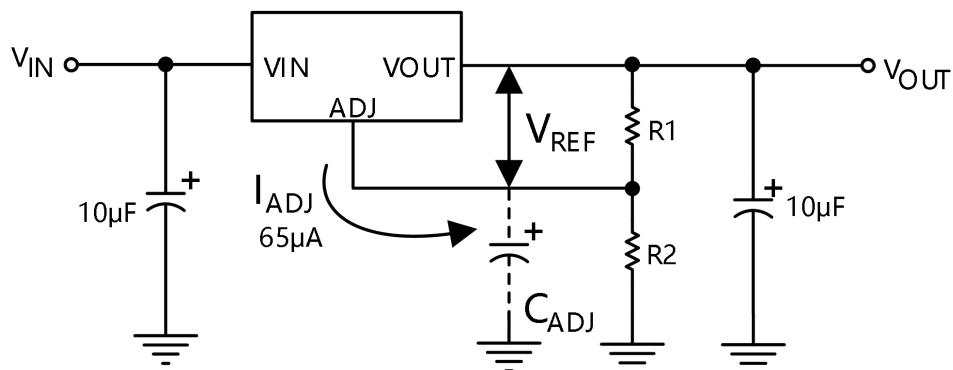

Figure 4. Basic Adjustable Regulator

Input Bypass Capacitor

An input capacitor is recommended. A 10µF tantalum on the input is a suitable input bypassing for almost all applications.

Adjust Terminal Bypass Capacitor

The adjust terminal can be bypassed to ground with a bypass capacitor (C_{ADJ}) to improve ripple rejection. This bypass capacitor prevents ripple from being amplified as the output voltage is increased. At any ripple frequency, the impedance of the C_{ADJ} should be less than R1 to prevent the ripple from being amplified:

$$(2\pi f_{RIPPLE} C_{ADJ}) < R1$$

The R1 is the resistor between the output and the adjust pin. Its value is normally in the range of

100- 200Ω. For example, with $R1 = 124\Omega$ and $f_{RIPPLE} = 120\text{Hz}$, the C_{ADJ} should be $11\mu\text{F}$.

Output Capacitor

CBM1117 requires a capacitor from V_{OUT} to GND to provide compensation feedback to the internal gain stage. This is to ensure stability at the output terminal. Typically, a 10µF tantalum or 50µF aluminum electrolytic is sufficient.

Note: The ESR is typically 1.0 Ω.

The output capacitor does not have a theoretical upper limit and increasing its value will increase stability. $C_{OUT} = 100\mu F$ or more is typical for high current regulator design.

Load Regulation

When the adjustable regulator is used (Fig.5), the best load regulation is accomplished when the top of the resistor divider (R1) is connected directly to the output pin of the CBM1117. When so connected, RP is not multiplied by the divider ratio. For Fixed output version, the top of R1 is internally connected to the output and ground pins can be connected to low side of the load.

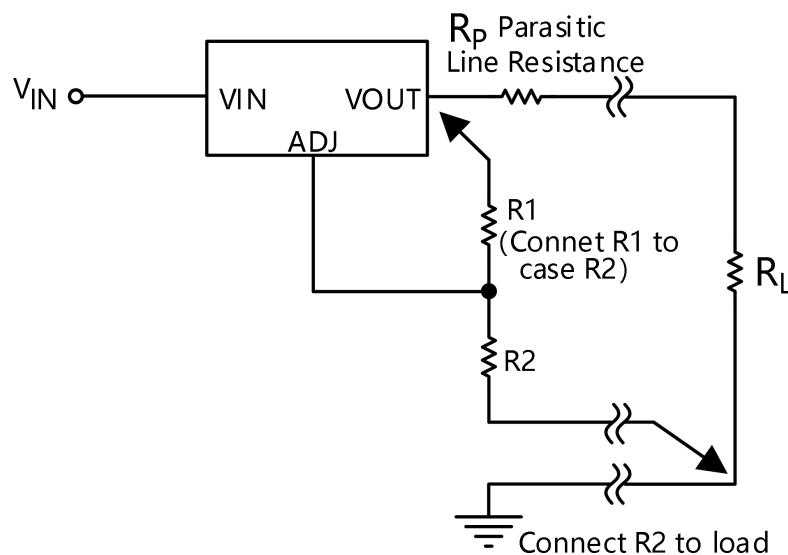

Figure 5. Best Load Regulation Using Adjustable Output Regulator

Thermal Protection

CBM1117 has thermal protection which limits junction temperature to 150°C. However, device functionality is only guaranteed to a maximum junction temperature of +125°C. The power dissipation and junction temperature for CBM1117 in DPAK package are given by

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT}$$

$$T_{JUNCTION} = T_{AMBIENT} + (P_D \times \theta_{JA})$$

Note: TJUNCTION must not exceed 125°C

Current Limit Protection

CBM1117 is protected against overload conditions. Current protection is triggered at typically 1.6A.

Thermal Consideration

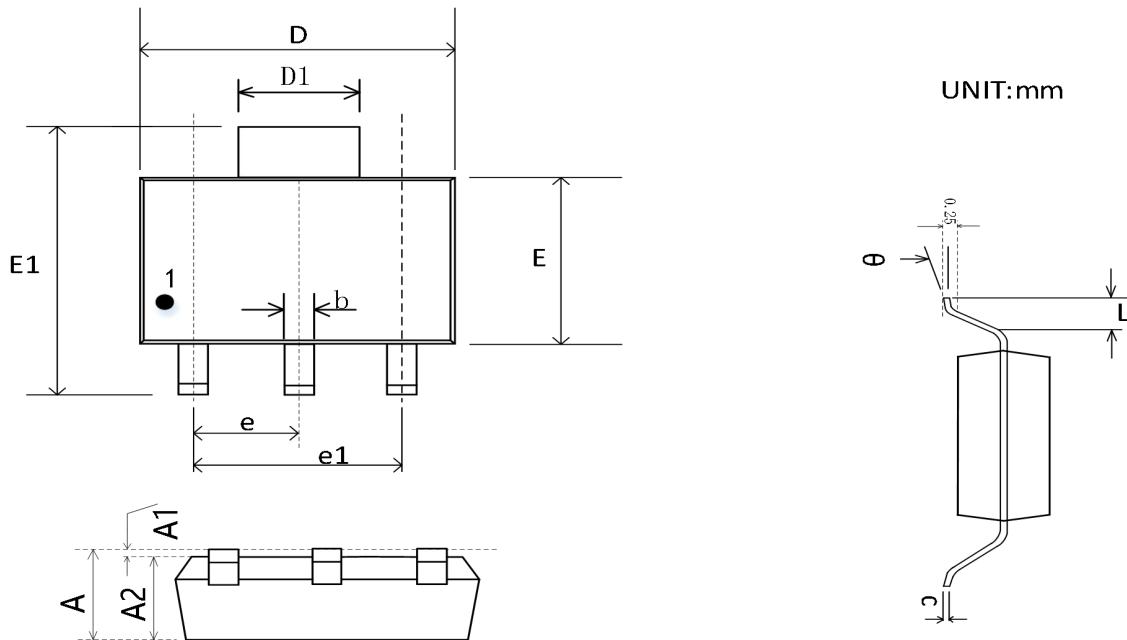

The CBM1117 series contain thermal limiting circuitry designed to protect itself from over-temperature conditions. Even for normal load conditions, maximum junction temperature ratings must not be exceeded. As mention in thermal protection section, we need to consider all

sources of thermal resistance between junction and ambient. It includes junction-to-case, case-to-heat-sink interface, and heat sink thermal resistance itself.

Junction-to-case thermal resistance is specified from the IC junction to the bottom of the case directly below the die. Proper mounting is required to ensure the best possible thermal flow from this area of the package to the heat sink. The case of all devices in this series is electrically connected to the output. Therefore, if the case of the device must be electrically isolated, a thermally conductive spacer is recommended.
